

# VIRTUAL-Q

## A NEW LEADER IN CLOUD COMPUTING

### VirtualizeIT

Virtual-Q provides the only complete hosted desktop solution - the 'Q'. Designed for companies of any size, the Q reduces on-going costly IT capital expenditures related to the individual end-user computing experience. The Q is a Computing-as-a-Service (CaaS) offering that simplifies and transforms the costs associated with hardware, storage, operating system, applications, anti-virus, maintenance and support into a fixed, manageable monthly operating budget.

### The Q Solution

The Q liberates computer users from the conventional data center-related resource constraints, by delivering high-speed secure computing, applications, storage, backup and services via almost any Internet accessible device.

The Q includes the latest Microsoft Office, security and support demanded by today's competitive and sophisticated business community as a manageable monthly operating expense in lieu of a significant capital investment. The Q establishes a new benchmark in network management Service Level Agreements (SLA) with 24/7 customer support.

## ManageIT

The Q uniquely manages and protects critical desktop environments, while non-disruptively maximizing system performance/capacity as application needs change. Organizations of any size wanting to leverage desktop virtualization with the Q will realize the following features and benefits:

- Transforms costly IT capital investments into a manageable monthly operating expense.
- Reduces security risks and the cost and complexity to meet compliance mandates.
- Includes the latest version of Microsoft Office, anti-virus software, and eliminates the need for costly enterprise software license agreements.
- Provides daily backups and 80GB storage per desktop - allocated individually or across the enterprise at no additional fees.
- Increases your return on investment related to IT expenses (personnel, equipment, and software), facilities use, energy consumption, user downtime (during transition and following), and security risk.
- Supports existing user and custom applications – on any Windows or Linux platform.
- Allows for a complete customizable user experience, with high levels of consistency, reliability, and uniformity (e.g., no disruptions due to software upgrades, virus infections, non-responsive applications, or frozen screens).
- Delivers transparent user transitions - with minimal training or preparation required.
- Eliminates the need for costly hardware refresh or upgrades - supports all PC, Mac, Thin-clients, Smartphone, iPhone and iPad devices.
- Allows full use of existing peripherals (e.g., printers, scanners, etc.) through most any internet accessible device.

## GreenIT

For the next generation business corporation, reducing carbon footprint is no longer a matter of ethics, it has become a necessity. Maintenance and service of huge, power hungry data-centers is a liability that is no longer viable. Several studies have shown that customers tend to opt for greener corporations with a reduced carbon footprint. So going green not only boosts the organization's image in the market, but also reduces direct financial overheads.

The Q removes the traditional limitations for computing power imposed by physical-geographical boundaries. Now high quality computing power is available on-demand and with a significantly lower overhead. Service and maintenance shifts off your backyard onto specialized datacenters in remote locations.

- Reduce data center energy costs and meet corporate sustainability mandates by improving utilization of existing assets
- Fulfill corporate and government mandates to reduce your organization's carbon footprint by improving hardware utilization
